

RECLAMITE – ASPHALT REJUVENATOR APPLICATION

The City has hired Corrective Asphalt Materials LLC, (CAM) to apply an asphalt rejuvenator, Reclamite, to various asphalt roads within the City. Reclamite adds approximately 25% to the life of an asphalt roadway. The City has been using this material for 4 years now. This year one of the roads to be treated is Calhoun Road from North Avenue to Capitol Drive, the work is starting Tuesday, August 30, 2022. There will also be a few other roads within the City, which are expected to be treated on Wednesday, August 31, 2022. Roads treated will include roads which have been repaved within the last year.

CAM will spray one lane at a time with Reclamite. It looks like chocolate milk coming out of the distributor truck (see photo). The product is allowed to be absorbed into the asphalt; this can take from 20 to 40 minutes. Then that lane is sanded via a truck with a tailgate spreader. Traffic can then be moved onto the sanded lane, and the next lane sprayed with Reclamite. CAM believes that it will take a day and a half, to complete the work on Calhoun. The sand will stay on the roadway for a couple of days, and we will sweep the road on September 1 & 2, 2022 to pick up as much sand as possible.

Reclamite is a great product for the City's asphalt roads. The Highway Division will have as many as 10 people assigned to assist CAM with traffic control. Also, loose gravel signs will be placed north and south of the streets as we begin work on each area, as well as placed at every intersection.

Please see our [FAQ sheet](#) for more information.

The Highway Division can be reached at (262) 782-5029, Monday – Friday, 7:00am to 3:30pm.
